SUMMARY

Fullstack Developer with 2.5+ years shipping production systems across React/Next.js/TypeScript frontends and Laravel/PostgreSQL/Node backends. Sole engineer owning end-to-end delivery on a document-management and research platform, from API design to complex frontend integrations (Canvas-based PDF processing, coordinate mapping). Comfortable working close to legacy and third-party systems — integrating REST APIs, automating data pipelines (n8n, Gemini API), and debugging cross-stack issues from database to UI. Seeking a high-ownership, backend-leaning role.

EXPERIENCE

Frontend Lead Engineer (Fullstack) — Universidad Católica de Pereira (UCP) *Jan 2026 - Present*

- Sole engineer owning a document-management (GD) module and research-management platform end-to-end, from Laravel/PostgreSQL API design to the React/Next.js/TypeScript frontend consuming it.
- Built a PDF signature-zone system using the Canvas API layered over react-pdf-viewer, including custom coordinate-mapping logic to translate on-screen click positions into precise PDF page coordinates — closest analog on this team to reverse-engineering an undocumented data format.
- Diagnosed and fixed a Laravel/React form-submission pipeline bug caused by FormData/PUT incompatibility, restoring reliable data writes across the module.
- Refactored a legacy folder structure (hours/attendance module) into a flat, maintainable layout to reduce future integration risk.

Frontend Lead — Cerebria

Jan 2025 - Jan 2026

- Owned end-to-end frontend development as the sole frontend engineer, shipping production features on Next.js 15/16 and Vite.
- Designed authentication flows and data-protection standards with a security-first mindset, reducing security incidents.
- Architected a modular, component-based frontend that improved code reusability by 40% and cut developer onboarding time.

Fullstack Developer — El Mono Bandido (Restaurant Group)

Jul 2025 - Jan 2026

- Built end-to-end fullstack features integrating REST APIs with responsive frontend interfaces.
- Optimized PostgreSQL queries and backend logic, improving server response times by 25%.
- Built Gemini Vision-based invoice validation and inventory anomaly detection, plus automated WhatsApp PDF delivery via n8n — an end-to-end pipeline from external data ingestion to structured output delivery.

PROJECTS

Social Events App — Django Ninja, PostgreSQL, Docker, Expo/React Native

- Designing and building the backend from scratch: data models for users, events, and attendance, with Django Ninja REST endpoints and a Dockerized environment deployed via Coolify (Oracle Cloud/Hetzner).

SKILLS

Backend: Laravel, Node.js, Django Ninja, PostgreSQL, MySQL, REST API design, n8n workflow automation

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS

Cloud & DevOps: AWS (Cloud Foundations, Security Builder), Docker, CI/CD debugging, Oracle Cloud/Hetzner deployment

Other: Gemini API integration, Python (ML/automation), Git, AI-assisted dev (Claude, Copilot)

CERTIFICATIONS

Cisco Certified CyberOps Associate (2026) · Google Cybersecurity Professional Certificate (2025) · AWS Academy Cloud Security Builder & Foundations (2025) · AWS Academy Cloud Foundations (2024)

EDUCATION

Specialization in ICT & B.S. in Systems Engineering

Universidad Tecnológica de Pereira (UTP) — 2025 - 2026
